Pred.

No.

is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

    Clone distribution: MGC clone distribution information can be for through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAL Plate: 17 Row: k Column: 11
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.

This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are
                                                                                                                                                                                                                                                                                                                            Stapleton, M., Brokstein, P., Hong, L., Agbayani, A., Carlson, J., Champe, M., Chavez, C., Dorsett, V., Farfan, D., Frise, E., George, R., Gonzalez, M., Guarin, H., Li, P., Liao, G., Miranda, A., Mungall, C.J., Nunoo, J., Pacleb, J., Paragas, V., Park, S., Phouanenavong, S., Wan, K. HABC7 is an ABC transporter protein. The DNA, vectors containing it and recombinant host cells are useful for recombinant production of HABC7. The DNA, HABC7 and antibodies against HABC7 are useful as research reagents, for screening assays and in diagnostic assays. Antagonists and agonists of HABC7 can be used to inhibit or enhance, respectively, the activity of HABC7 or expression of the HABC7 coding sequence. Anti-HABC7 antibodies and HABC7 or its fragments can be used in vaccines. In particular, the proteins, antibodies, agonists and antagonists can be used for treating, e.g. cancer, autoimmune disease, Addison's disease, microsomal disorders and insulin-dependent diabetes mellitus, related to both an excess and insufficient amounts of HABC7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 2384 BP; 719 A; 467 C; 567 G; 631 T; 0 other;

Claim 4; Fig 1, 39pp; English

The present sequence encodes human ATP-binding cassette transport protein (ABCtxH). The ABCtxH proteins are involved in disease related transport processes, particularly in cancers and neuronal disorders.

Antagonists of ABCtxH can be used to prevent or treat cancers or neuronal disorders e.g. Alzheimer's disease, amnesia, amyotrophic lateral sclerosis, bipolar disorder, catatonia, cerebral neoplasms, demencia, depression, Down's syndrome, tardive dyskinesia, dystonias, epilepsy, Huntington's disease, multiple sclerosis, neurofirbomatosis, Sequence 2407 BP; 726 A; 477 C; 570 G; 629 T; 5 other; Parkinson's disease, paranoid psychoses, schizophrenia or Tourette's Piagrasis - T.
